* we need a one liner to describe what we do*

"Australian youth building our sociotechnical future"

Youth Tech Net brings together a network of young people with a diversity of experience, so we can weave a better sociotechnical future.

/

At Youth Tech Net, we firmly believe in the *sociotechnical* nature of emerging technologies, and that young people have right, and capability, to be involved in solving the problems these technologies cause.

We believe in a future for our generation where technology supports the wellbeing of all people.

/

We aim to shape the design of emerging technology in three ways: through fostering critical engagement with technology, engaging in interdisciplinary problem-solving through original research, and influencing Australian tech policy. Our focus is on University campuses, where young people are exposed to the ideas that they carry for life.

Three pillars: Hubs, Research, Advocacy.

▼ **What we do**

    ▼ University Hubs

        ▼ We operate university hubs across Australia that engage students in education and discussion on technology and society issues. Through these hubs, we foster informed, critical engagement with the societal impacts of emerging technologies.

▼ Our hubs run seminars, workshops and information sessions that create space for students to think critically about technology and its role in society.

▼ Student led research

We conduct research and support youth-led projects across disciplines, including computer science, AI trust and safety, AI ethics, and technology policy, law, and regulation.

▼ Policy advocacy

We give youth a voice to Australian policy issues by running tech policy engagement programs and publishing policy recommendations.

▼ **Join or start a hub**
